## 1. Safety Information

#### 1.1 Note, Caution and Warning

This document uses the following conventions. **Note, Caution and Warning** . to alert you to special instructions, tips, or hazards for a given procedure. Please familiarize yourself with the conventions described below.

Indicates important information that requires special attention, such as a procedure for a specific vehicle, or tips on operating the equipment.

Indicates the potential for damage to equipment, accessories, or the vehicle unless you follow the instructions or procedure exactly.

Indicates the potential for property damage, personal injury, or death due to hazards associated with the equipment, vehicle, or environment. Do no perform any procedure until you have read and understood the warning instructions.

#### 1.2 Important Information

- 1. Carefully read this manual thoroughly before installing, operating, or maintaining this lift.
- 2. This lift is designed for indoor use only, and should not be installed in a pit or depression.
- The lifts have specific electrical requirements as described in the Installation Instructions section of this manual.
- Failure by the owner to provide the recommended shelter, mounting surface, electrical supply, and ceiling height could result in unsatisfactory lift performance, property damage, or personal injury.
- 5. The operation of the lift is permitted by authorized person only.
- 6. Keep this guide as well as all the supplied technical literature in a safe place close to the lift so that operators are able to read it whenever necessary.
- 7. If any confusion, please contact the service provider or your distributor.

## 1.3 Safety Instructions

- 1. **Do not** raise a vehicle on the lift until the initialization is completed as described in this manual.
- 2. Technicians should be trained to use and care for the lift by familiarizing themselves with the publications listed above. The lift should **never be operated by an untrained person.**
- Do not overload the lift. The capacity of the lift is shown on cover of this document and on the lift
   serial number tag.
- 4. Positioning the vehicle is very important. Only trained technicians should position the vehicle on the lift. Never allow anyone to stand in the path of the vehicle as it is being positioned and never raise vehicle with passengers on vehicles.

- 5. Keep everyone clear of the lift when the lift is moving, the locking mechanism is disengaged, or the vehicle is in danger of falling.
- 6. Unauthorized personnel should never be in the shop area when the lift is in use.
- 7. Inspect the lift daily. The lift should never be operated if it has damaged components, or is malfunctioning. Only qualified technicians should service the lift. Replace damaged components with manufacturer's parts, or equivalent.
- 8. Keep the area around the lift clear of obstacles.
- 9. Never override the self-returning lift controls.
- 10. Avoid excessive rocking of the vehicle when it is on the lift.
- 11. To reduce the risk of personal injury, keep hair, loose clothing, fingers, and all body parts away from moving parts.
- 12. To reduce the risk of electric shock, **do not** use the lift when wet, do not expose the lift to rain.
- 13. To reduce the risk of fire, **do not** operate equipment in the vicinity of open containers of flammable liquids (gasoline).
- 14. Use the lift only as described in this manual, use only manufacturer's recommended attachments.
- 15. The maintenance procedures described in this manual can be done by the lift owner/employer. Any other procedure should only be performed by trained lift service personnel. These restricted procedures include, but are not limited to, the following: cylinder replacement, platform& safety latch replacement, motor replacement, oil replacement& refilling and lubrication.
- 16. Anyone who will be in the vicinity of the lift when it is in use should familiarize themselves with following Caution, Warning, and Safety related decals supplied with this lift, and replace them if they are illegible or missing.
- 17. Never move the lift when the vehicle is loaded.
- 18. Only use on a level concrete surface with a recommended minimum thickness of 4+. DO NOT install on an asphalt surface.
- Only remove the vehicle when the lift platform is at the lowest position.
- 20. Never lift the vehicle with persons riding on it.

#### 1.4 Caution and Warning Labels

#### IMPORTANT INSTRUCTIONS

- The operation of the lift is permitted by authorised persons only.
- The lift is used for indoor only and should be placed on the flat ground.
- It shall draw attention to the rule that the load carrying device shall beobserved by the operator throughout the motion of the lift.
- It is forbidden for people to stand in the field of motion of the load and the load carrying device during the movement, if appropriate.
- It is forbidden to climb onto the load or load carrying device when they are raised unless via a specifically designed access.

#### IMPORTANT INSTRUCTIONS

- Movable and mobile lifts shall be prevented from moving unintentionally.
- It is necessary to refer to the complete operation instructions, especially for trouble shooting.
- The field of motion of the load and of the load carrying devices shall be free of obstructions.
- It shall draw attention to the safe method of carrying the load and to the rule that, after raising a short distance, the vehicle shall be checked to ensure that it is correctly and safely positioned.

## 2. Technical Specification

## 2.1 Product Description

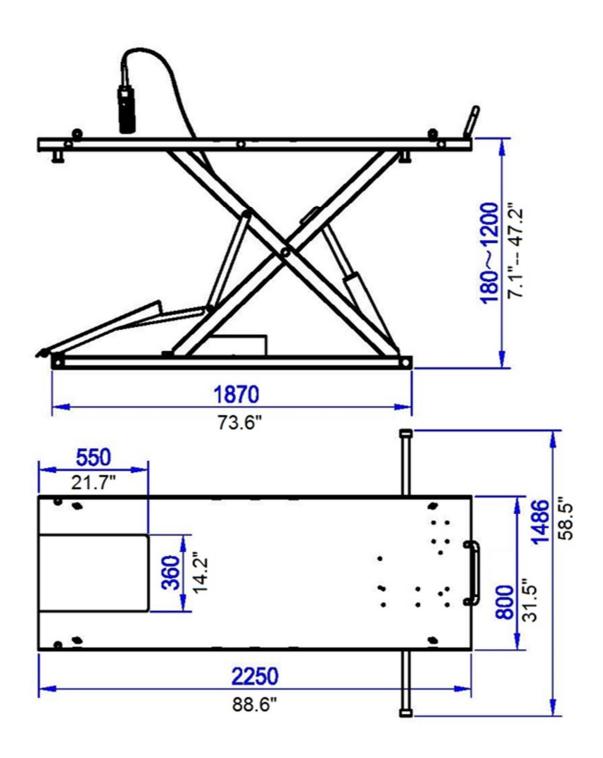

The M-2200IEH-XR Motorcycle lift bench is used for repairing and maintaining motorcycles by 110VAC-60Hz, 1Ph power source incorporating the latest safety technologies. The M-2200IEH-XR is designed and manufactured for a max lifting capacity of 2,200 lbs. (1,000kg), and is fully capable for lifting most all motorcycles, while safely holding them in an elevated, locked height position.

The electro-hydraulic motorcycle lift consists of a fixed structural scissor lift, hand held remote controller and exclusive retractable ramp.

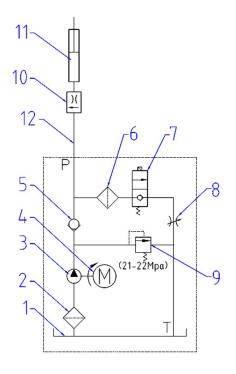

## 2.2 Product Specifications - M-2200IEH-XR

| Capacity:            | 2,200 lbs.(1,000 kg)            |
|----------------------|---------------------------------|
| Lifting Height, Max: | 47.2+(1,200 mm)                 |
| Height, Min:         | 7+(180 mm)                      |
| Width Overall:       | 58.5+(1486 mm)                  |
| Length Overall:      | 116.5+(2959 mm) - Fully Lowered |
| Platform Length:     | 88.6+(2,250 mm)                 |
| Platform Width:      | 31.5+(800 mm)                   |
| Power Supply:        | 110V, 60Hz, 1 Phase,18A         |
| Lifting Time:        | 30 S                            |
| Lowering Time:       | 30 S                            |
| Gross Weight:        | 790 lbs.                        |

## 3. Preparing and Installation

#### 3.1 Site Selection

The hydraulic motorcycle lift is designed only for indoor use. Application in a room with explosion hazard is not permitted. Setting in a wet place, a car wash bay for instance, is also not recommended. Make sure to check the desired location for possible obstructions such as a low ceiling, overhead lines, adequate working area, access ways, exits, etc.

#### 3.2 Surface Condition

The lift should be installed on level ground with a concrete surface free from as many defects as possible to prevent unit from tipping or rocking. Only use on a level concrete surface with a recommended minimum thickness of 4+ DO NOT install on an asphalt type surface.

Failure in accomplish the foundation requirement may cause the lift instability or personal injury. Installing on asphalt, soft clay floor or near the expansion gap is prohibited.

#### 3.3 Necessary Tools

Scissors, Screw Driver, Rubber Hammer, Adjustable Spanner Wrench, (Ext.) Snap Ring Pliers and Hex Key Set. Forklift & Soft Sling Straps also recommended.

#### 3.4 Personal Protective Equipment

Always wear proper protective equipment like proper clothing, shoes, gloves & safety glasses, etc.

#### 3.5 Set-Up & Installation

## 1. Unpacking

- a. Carefully open crate and remove any loose parts from top of lift structure.
- b. Using a forklift (recommended) carefully remove lift from crate and place in the desired location (Fig.1).

Ensure to check product and packing list to make certain all required parts are included and in good condition.

Fig.1

Oct. 2018 M-2200IEH-XR

#### 2. Power Connection

Before power connection is made, check your power supply outlet to ensure it's in accordance with the requirements of the lift.

a. Connect lift electrical plug to a 110V-60Hz, 1Ph, 20A power supply outlet. Protection against power surges shall be provided by the user.

#### 3. Starting Up (No Load on Lift)

- a. Using the Remote Pendant Control, raise the platform to full height by pressing the (GREEN) UP ↑ button. (Fig. 2)
- b. Lower the lift to floor by pressing the **(BLUE) DOWN** ↓ button.
- c. With no load on lift, cycle up and down several times to get the air out of the hydraulic system. (Wait 2 minutes between cycles)
- d. After cycling lift, raise and secure at almost full height by pressing the (BLACK) PARKING button to secure lift in the locking position, as the electronic latches will automatically engage. (Securing lift at full to mid height is best for Assembly.)

Fig. 2

#### 4. Assembly

a. Attach or insert the front Wheel Stop Bar(s), Tie-Down Eyelets, Retractable Ramp & Stabilizer / Balance Bars - (Figs 3, 4 & 5)

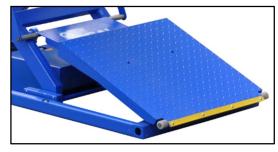

Fig. 3 Fig 4

Fig. 5

#### 5. Change the Tank Plug

Remove ±lackqshipping Plug from reservoir tank and replace with the ±rassqventilating Plug - (Figs 6 & 7)

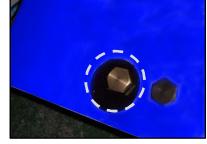

Fig. 6

Fig. 7

The Lift is now ready for Operation

## 4. Operation

Be sure to read and familiarize yourself with the Safety Instructions at the beginning of this manual. Be sure to wear gloves, protection glasses and all necessary personal protective equipment. Failure to follow Safety Instructions may result in property damage, personal injury or death.

#### 4.1 Operating Instructions

Be sure to read and familiarize yourself with the Safety Instructions at the beginning of this manual. Failure to follow Safety Instructions may result in property damage or personal injury.

To avoid personal injury and/or property damage, permit only trained personnel to operate lift.

ALWAYS use tie downs to secure vehicle to lift while in operation.

#### 1. Lift Preparation:

Lift must be fully lowered and area clear of all personnel before vehicles are placed on lift.

#### 2. Loading Lift:

• Carefully push the vehicle on the fully lowered lift platform while keeping the vehicle centered and aligning the center of gravity of the equipment with the center of the lift platform. (For motorcycles, push forward until the front wheel touches the Wheel Stop or engages into the ±ptionalqmounted Vise or Chock).

<u>Securing Motorcycle</u> - Secure motorcycle to lift using tie-down straps. Straps MUST be used to properly secure motorcycle to lift platform.

Before attempting to lift any vehicles, be sure that vehicle is stable and properly secured on lift.

#### 3. To Raise Lift & Lock

- a. Push (GREEN) UP † button on the remote ±hand heldqpendant controller.
- b. Raise vehicle to the desired height, then release the **(GREEN) UP** † button.
- Push the (BLACK) PARKING button to lower the vehicle onto the locking position, as the locking latches will automatically engage.

#### 4. (Emergency Button)

 The lift can be switched off immediately by pressing down the (RED) Emergency button on Remote Pendant Control.

When any emergency situation comes, press down the emergency stop button immediately to stop the lift. When emergencies are resolved, 'twist & pull' the red knob to release the emergency button to disengage the emergency stop mode.

#### 5. To Lower Lift

Check all danger points of the lift and be sure that there are no tools, objects or people in the working area (danger area) around the lift or under the lift before lowering.

- a. If the lift is already in the locked position (latches are engaged), press the (GREEN) UP ↑ button to raise the lift a short distance to disengage the latch mechanisms.
- b. Then press (**BLUE**) **DOWN** ↓ button on remote controller to lower lift to the floor, while observing the complete lowering process to check for any unexpected movement.
- c. Carefully remove the vehicle off of the lift platform, after lift is fully lowered to floor.

Remain clear of lift when lowering vehicle. Observe pinch point warning decals.

If lift is not operating properly, DO NOT use until adjustment or repairs are made by qualified lift service personnel.

DO NOT use the (BLACK) PARKING button instead of the (BLUE) DOWN button to lower.

NEVER press the UP or DOWN button for a long time while the lift is not moving, or the control system will be damaged. Release button if you find the lift is not properly responding.

Once finished with lift operation, engage the emergency button and unplug the lift is recommended.

If any unsafe movement of the lift occurs, do not to operate the lift and call the local distributor for assistance.

#### 5. Maintenance Instructions

Contact your service provider for instructions before starting up if you are not completely familiar with lift maintenance procedures. Only qualified personnel can perform maintenance on this equipment. Any failure in operation may cause personal injury and/or damage to lift.

#### Daily:

- ✓ Wear necessary protective equipment before use, includes, but not limited, gloves and protection glasses, working suits and shoes.
- ✓ Always keep bolts tight. Check periodically.
- ✓ Always keep lift components clean.
- ✓ If oil leakage is observed, contact your service provider.
- ✓ Check safety latches for free movement and full engagement with lift are properly working.
- ✓ Check hoses connections for leakage.

#### **Every Month:**

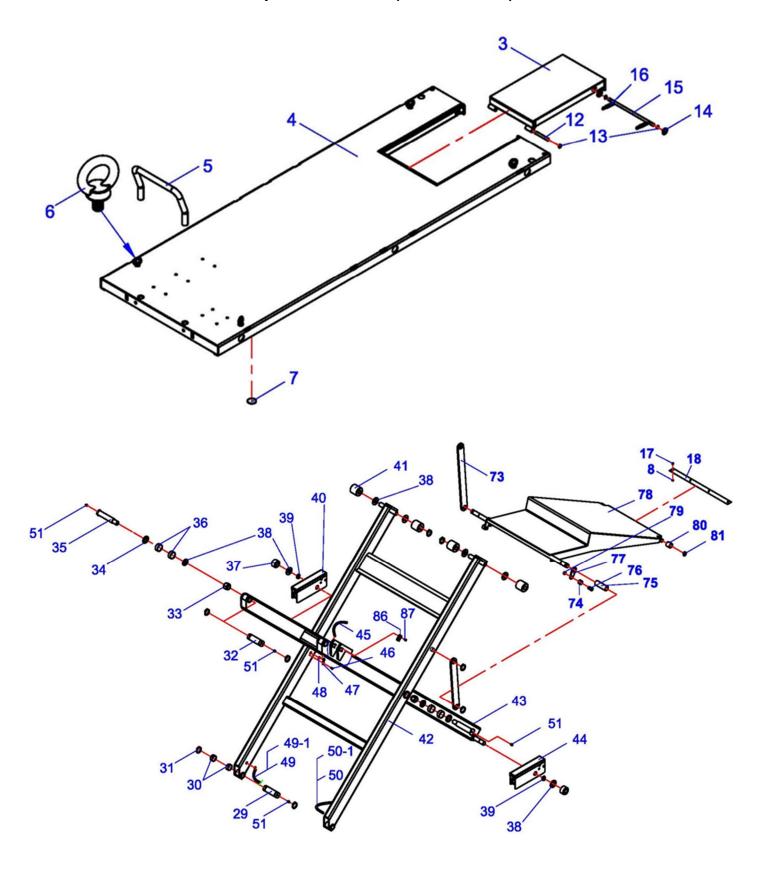

- ✓ Lubricate locking latch shafts. Push latch handle several times for oil to penetrate joints.
- ✓ Lubricate the sliding pieces with heavy duty bearing grease.
- ✓ With lift lowered check the hydraulic fluid level. If necessary add oil as described in the Installation Instruction section of this manual
- ✓ Check platform latch synching: Latches should click at the same time.
- ✓ Check tightness of all bolts.
- ✓ Check the nuts for tightness every week for the first month, and every month afterwards.

#### **Every 6 Months:**

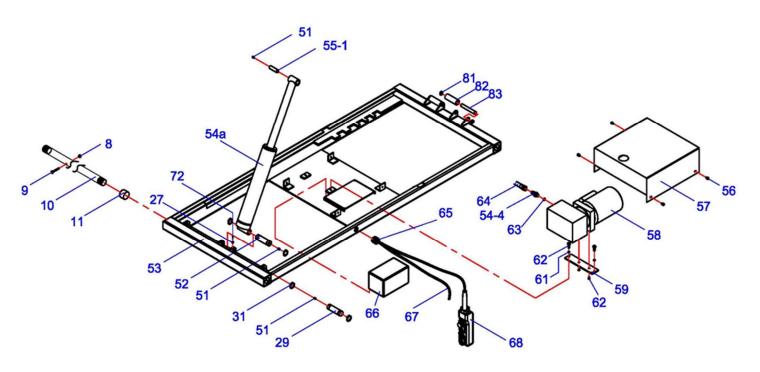

- ✓ Check and clean the oil filter, if applies.
- ✓ Check the hydraulic oil for proper level with lift in down position. Refill reservoir tank with hydraulic oil if necessary with AW 32 or AW46 Non-Detergent Non-Foaming Anti-Wear Hydraulic Oil.
- ✓ If Lift stops short of full rise or chatters, contact your service provider.
- Replace all caution, warning or safety related decals on the lift if unable to read or missing. Reorder labels from service provider.
- Check all components for wear.

# 7. Troubleshooting Guide

| A. | Problem   | Motor does not run.   |  |
|----|---|---|--|
|    | Possible cause:                                     | Solution:   |  |
|    | Blown fuse or circuit breaker.                      | Replace fuse or reset circuit breaker.                      |  |
|    | <ol><li>Incorrect voltage to motor.</li></ol>       | Supply correct voltage to motor.                            |  |
|    | <ol><li>Bad wiring connections.</li></ol>           | <ol><li>Repair and insulate all connections.</li></ol>      |  |
|    | 4. Motor up switch burned out.                      | 4. Replace switch.  |  |
|    | <ol><li>Overhead limit switch burned out.</li></ol> | 5. Replace switch.  |  |
|    | Motor windings burned out.                          | 6. Replace motor.   |  |
| B. | Problem   | Motor runs but lift will not raise.                         |  |
|    | Possible cause:                                     | Solution:   |  |
|    | <ol> <li>Open lowering valve.</li> </ol>            | Repair or replace lowering valve.                           |  |
|    | 2. Pump sucking air.                                | Tighten all suction line fittings.                          |  |
|    | <ol><li>Suction stub off pump.</li></ol>            | 3. Replace suction stub.                                    |  |
|    | 4. Low oil level.                                   | 4. Fill tank with SAE-10, AW 32 or equivalent.              |  |
| C. | Problem   | Lift will raise up only without load.                       |  |
|    | Possible cause:                                     | Solution:   |  |
|    | <ol> <li>Motor running on low voltage.</li> </ol>   | Supply correct voltage to motor.                            |  |
|    | 2. Debris in lowering valve.                        | Clean lowering valve.                                       |  |
|    | <ol><li>Improper relief valve adjustment.</li></ol> | 3. Replace relief valve cartridge.                          |  |
|    | 4. Overloading.                                     | Check or balance the vehicle weight on lift.                |  |
| D. | Problem   | Lift slowly settles down.                                   |  |
|    | Possible cause:                                     | Solution:   |  |
|    | <ol> <li>Debris in check valve seat.</li> </ol>     | 1. Clean check valve.                                       |  |
|    | 2. Debris in lowering valve seat.                   | Clean lowering valve.                                       |  |
|    | 3. External oil leaks.                              | Repair external leaks.                                      |  |
| E. | Problem   | Slow lifting speed or oil blowing out breather cap          |  |
|    | Possible cause:                                     | Solution:   |  |
|    | <ol> <li>Air mixed with oil.</li> </ol>             | 1. Change oil to non-foamingqSAE-10, AW 32 or equivalent.   |  |
|    | <ol><li>Air mixed with oil suction.</li></ol>       | Tighten all suction line fittings.                          |  |
|    | 3. Oil over filled.                                 | 3. Only fill or add oil to tank when lift is fully lowered. |  |
|    | 4. Debris in check valve seat.                      | 4. Clean check valve.                                       |  |
|    | 5. Debris in lowering valve seat.                   | 5. Clean lowering valve.                                    |  |
| H. | Problem   | Locking latches do not engage.                              |  |
|    | Possible cause:                                     | Solution:   |  |
|    | Latches and/or shafts rusted.                       | Remove covers, oil latch mechanism. (Depress latch          |  |
|    |   | release handle several times to allow oil to coat shaft.)   |  |
|    | 2. Release the lock without lifting.                | 2. Raise lift a short distance first.                       |  |
|    | 3. Latch cable broken or bad connection.            | <ol><li>Check cable connection or replace.</li></ol>        |  |

#### **LIMITED WARRANTY**

#### **Structural Warranty:**

The following parts and structural components carry a five year warranty:

Columns Arms Uprights Swivel Pins Legs Carriages Overhead Beam

Tracks Cross Rails Top Rail Beam

#### Limited One-Year Warranty:

Tuxedo Distributors, LLC (iDEAL) offers a limited one-year warranty to the original purchaser of Lifts and Wheel Service equipment in the United States and Canada. Tuxedo will replace, without charge, any part found defective in materials or workmanship under normal use, for a period of one year after purchase. The purchaser is responsible for all shipping charges. This warranty does not apply to equipment that has been improperly installed or altered or that has not been operated or maintained according to specifications.

#### Other Limitations:

This warranty does not cover:

- 1. Parts needed for normal maintenance
- 2. Wear parts, including but not limited to cables, slider blocks, chains, rubber pads and pulleys
- 3. Replacement of lift and tire changer cylinders after the first 30 days. A seal kit and installation instructions will be sent for repairs thereafter.
- 4. On-site labor

Upon receipt, the customer must visually inspect the equipment for any potential freight damage before signing clear on the shipping receipt. Freight damage is not considered a warranty issue and therefore must be noted for any potential recovery with the shipping company.

The customer is required to notify Tuxedo of any missing parts within 72 hours. Timely notification must be received to be covered under warranty.

Tuxedo will replace any defective part under warranty at no charge as soon as such parts become available from the manufacturer. No guarantee is given as to the immediate availability of replacement parts.

Tuxedo reserves the right to make improvements and/or design changes to its lifts without any obligation to previously sold, assembled or fabricated equipment.

There is no other express warranty on the Tuxedo lifts and this warranty is exclusive of and in lieu of all other warranties, expressed or implied, including all warranties of merchantability and fitness for a particular purpose. To the fullest extent allowed by law, Tuxedo shall not be liable for loss of use, cost of cover, lost profits, inconvenience, lost time, commercial loss or other incidental or consequential damages.

This Limited Warranty is granted to the original purchaser only and is not transferable or assignable.

Some states do not allow exclusion or limitation of consequential damages or how long an implied warranty lasts, so the above limitations and exclusions may not apply. This warranty gives you specific legal rights and you may have other rights, which may vary from state to state.

8320 E Hwy 67, Alvarado, TX 76009 Ph. 817-558-9337 / Fax 817-558-9740
